

# COMMUNITY PLANNING ASSISTANCE FOR WILDFIRE

Together we can reduce wildfire risk in your community.

## Examples of Community Tools

**Landscaping Regulations** require property owners to manage hazardous vegetation and maintain their properties.

**Forest Management Projects** reduce fuels within the wildland-urban interface (WUI).

**Watershed Management Plans** reduce wildfire through fuel treatments, protecting vital water resources.

**Land Preservation Tools** encourage agricultural lands to buffer development from wildfires.

**Building Codes** require ignition-resistant construction materials for new developments and retrofits.

**Steep Slope Ordinances** restrict development within high wildfire-risk areas.

**Land Use and Development Codes** incentivize developers to plan open space and recreational trails, creating fuel breaks.

**Subdivision Design Standards** require risk reduction features, such as minimum road widths, secondary access, and adequate water supply.

**Local Governments** support fire adapted communities through good land use planning.

Good land use planning helps reduce wildfire costs, increases public safety, and improves forest health.
